Education

Seshadripuram Institute of Technology, Mysore

B.E. in Artificial Intelligence and Machine Learning

2024 – Present

8.65/10 CGPA

Vidya Vikas PU College, Mysore

Pre-University (PCMB)

2022 – 2024

86.6%

Mandara Jnanadayini School, Shimoga

Secondary School Examination (SSLC)

2022

80%

Experience

IBM SkillsBuild Academic Internship

June 2026

Generative AI & Cloud Computing Intern

CSRBOX in association with AICTE

- Completed a 6-week, 60-hour virtual internship focused on **Generative AI and Cloud Computing**, working on real-world problem statements in a team-based environment.
- Applied Generative AI and cloud computing concepts to practical problem-solving and collaborative software development tasks.

Projects

Marginal – AI Document Analyzer | React, TypeScript, Node.js, Gemini API

- Developed a full-stack SaaS application that processes PDF, DOCX, and TXT files and uses the **Google Gemini API** to generate document summaries, extracted entities, comprehension quizzes, and grounded question-answering.
- Engineered a secure **Node.js/Express** backend with server-side API key management, Multer file uploads, document text extraction, real-time response streaming, and rate limiting.
- Built a responsive **React and TypeScript** frontend with Tailwind CSS and Framer Motion, including drag-and-drop uploads, live analysis dashboards, and light/dark theming; containerized the application with Docker for AWS App Runner deployment.

AI-Powered Smart City Integration Platform (ASCIP)

- Developed an AI-powered smart city infrastructure and integration platform designed to unify urban data and services through a single accessible interface.
- Deployed and hosted the application on **Vercel**, demonstrating end-to-end web application development and deployment.

Voice Assistant and Scheduler – Shabdh

- Developed a voice-controlled assistant capable of executing commands, scheduling tasks, managing reminders, and recording information through voice interactions.
- Integrated speech recognition and automation features to improve user productivity and accessibility.

Crop Yield Estimation | Machine Learning, FastAPI

- Built a machine learning model to predict crop yield using agricultural and climate data and deployed the model through **FastAPI**.
- Generated AI-powered farming recommendations based on agricultural and climate inputs.

Achievements & Hackathons

1st Place – 24-Hour Hackathon, Malnad College of Engineering

- Secured **1st Place** after finishing among the **Top 5 teams out of 100+ participating teams** in a 24-hour hackathon at Malnad College of Engineering.
- Co-developed **AI-Assisted Intelligent Data Recovery and Digital Evidence Reconstruction**, focusing on recovery and analysis of deleted, damaged, fragmented, and partially corrupted digital data.
- Implemented solution concepts for **fragmented data reconstruction, data integrity and corruption assessment, recovered artifact classification and prioritization, relationship identification between data fragments, and restoration feasibility assessment**.
- Collaborated as a two-member team to complete ideation, development, debugging, testing, and final presentation within the 24-hour deadline.

Paytm AIBuild for India Hackathon – Bangalore Edition

- Shortlisted for the **Offline Finale Round**, selected among **140 students from 2,000+ applicants** for the Bangalore Edition.
- Worked on building a functional, end-to-end AI solution, gaining hands-on experience in **AI integration, full-stack development, API integration, rapid prototyping, debugging, and iterative development**.
- Collaborated with the DualStack team to transform an initial concept into a working solution under tight development timelines.

CodeStorm 2026 – Karnataka Edition

- Participated in an AI-focused hackathon organized by UNLOX and Seshadripuram Institute of Technology, gaining practical experience in AI tools, teamwork, problem-solving, and software development.

The Hitchhiker's Guide to MLOps & Mini Hackathon

May 2026

- Completed an MLOps workshop covering **DVC, MLflow, DagsHub, GitHub Actions**, and cloud deployment, followed by a team-based hackathon focused on designing and demonstrating an end-to-end machine learning pipeline.

Technical Skills

Programming Languages: C, Python, Java

AI / ML: Machine Learning, Generative AI, Natural Language Processing

Databases: MySQL, MongoDB

Development Tools: Git, GitHub, VS Code, PyCharm, Jupyter Notebook

Core Concepts: Data Structures & Algorithms, Operating Systems, Design & Analysis of Algorithms, Database Management Systems

Cloud / MLOps: Cloud Computing, Docker, AWS App Runner, DVC, MLflow, DagsHub, GitHub Actions

Certifications

- Engineer AI Agents with Agent Development Kit (ADK) – Google Skills
- Introduction to Generative AI – Google Skills
- Prompt Engineering – IBM SkillsBuild
- AWS Academy Graduate – Cloud Foundations
- GenAI Powered Data Analytics Job Simulation – Tata
- Introduction to Natural Language Processing – Infosys Springboard
- Cybersecurity Student Enablement Program – Infosys Springboard
- MongoDB Overview: Core Concepts and Architecture – MongoDB
- DBMS Certification – Infosys Springboard & Udemy
